Fermilab

“Fermipoint tutorial”

An fSHPE professional development event

Fermipoint is a web-based collaboration tool based on SharePoint 2013 that enables data and information sharing across the laboratory. Like a website, Fermipoint can provide a “face” for your group, project or experiment that you can share with the world, within Fermilab or within a smaller group. Fermipoint also provides a collaborative workspace that you can use to organize all of your organizations' information into a central repository and manage and share documents, calendars and other list items.
